Data Lead with a data engineering background

Ten years in data engineering, including two and a half years leading a four-person Data Team. Since 2026 I have built the Data/AI platform at Want Want China Times from scratch for executives, marketers and editors, and I also run the cloud under it.

EXPERIENCE

Want Want China Times Media Group · Data Lead · Principal Data Engineer — Apr 2026 – present

- Built a data platform that brings Facebook, Instagram, Threads, YouTube and GA4 data into BigQuery through 34 Cloud Run Jobs, modelled with dbt.
- Shipped three production tools for non-engineers: a group revenue dashboard, a social-performance dashboard and a newspaper-layout PDF generator.
- Put Gemini into production for comment and post classification, an editors' assistant and comment search, with weekly automated evaluation that alerts below threshold.
- Built the sales department's approval system on Cloud Run and Cloud SQL, with permissions and the audit trail enforced in the database.
- Built the GCP environment and deployment pipeline from scratch with scripts, cutting deploys from 302s to 85s; reduced service-account permissions based on audit logs.
- Cut a revenue pipeline from $300 to under $1 a month, and found why dashboards were costly, reducing Cloud Run instance hours by about 60%.
- Set up the team's decision records, onboarding and a cross-project knowledge base.

Cleflex Technology · Data Team Lead — May 2023 – Oct 2025

- Led a four-person Data Team, running scheduling and delivery with Scrum, and built Superset dashboards with the product team.
- Built Airflow crawling ETL and an Iceberg + Spark lakehouse, and standardised environments with Docker.

Amber Technology · Data Engineer — Nov 2022 – Apr 2023

- Moved on-prem data to GCP with Fluentd, introduced PySpark and planned the data architecture.

PIXNET · Senior Algorithm Engineer — Sep 2021 – Nov 2022

- Built fluenthub, a log-collection service on GKE, from scratch; it handled about 1,900 requests per second in load tests with no errors.
- Collected 9M rows of Search Console data a day; built trending-topic, ranking and recommendation algorithms.

LiTV · Software Engineer — Oct 2019 – Sep 2021

- Deployed Fluentd with Ansible across GCE and an on-prem data centre into BigQuery; built cross-cloud ETL from AWS and user-segment models.

Earlier · NCHC Software Engineer · NTUST Programming Lecturer · Dataa Data Analyst — Oct 2015 – Aug 2019

- AI-platform testing, Python teaching, and sentiment-analysis projects for government and business clients.

SKILLS

DATA ENGINEERING	BigQuery, dbt, Airflow, Spark, Iceberg, Fluentd, PostgreSQL
CLOUD	GCP (Cloud Run, Cloud SQL, GKE, IAM), AWS, Azure, hybrid cloud
DEVOPS	Docker, Kubernetes, GitHub Actions, Cloud Build, Ansible, Prometheus, Grafana
AI	Gemini, AI agents, RAG, LLM evaluation, Chinese text mining
OPEN SOURCE	Apache Airflow #67592, OpenClaw #84890 (both merged)
SIDE PROJECTS	realping.tw (property-price API and MCP service), bopomofokids.com (Zhuyin learning site)

EDUCATION

NTUST — Information Management
PhD candidate (candidacy 2019; left for industry) 2016 – 2019

Yuan Ze Univ. — Information Management
M.S. · Thesis on noise filtering & word-of-mouth mining in car forums 2013 – 2015

Kainan Univ. — Information & E-Commerce
B.S. 2009 – 2013
