Data Lead with a data engineering background

Ten years in data engineering, two and a half of them leading a Data Team. Since April 2026 I have built the group's Data/AI platform at Want Want China Times from zero, for executives, marketing leads and editors, none of them engineers, and run it myself from deployment and IAM to monitoring. I cut an inherited revenue pipeline from $300 to under $1 a month, and both the comment RAG layer and the newsroom agent have weekly evals that fail the job when quality drops.

EXPERIENCE

Want Want China Times Media Group · Data Lead · Principal Data Engineer — Apr 2026 – present

- **Built the group's cross-platform data platform from zero**: Facebook, Instagram, Threads, YouTube and GA4 ingestion — 34 staggered Cloud Run Jobs writing append-only history into BigQuery, modelled with dbt; dbt source freshness, account-level checks and Cloud Monitoring catch "job succeeded but wrote nothing" silent failures.
- **Cloud infrastructure and delivery**: a re-runnable gcloud script builds the GCP environment from zero (service accounts, IAM, Secret Manager, Artifact Registry, schedules, alerts); Cloud Build deploys on push (302s → 85s) and its cache stopped ~46GB/month of image growth; narrowed a shared project's service-account access to what audit logs showed it used (IAM conditions + resource-level bindings, with rollback).
- **Rewrote an inherited revenue pipeline, $300 → under $1 a month**; shipped three production tools for non-engineers: a group revenue dashboard (C-level), a social-performance dashboard (marketing and editors) and a tool that typesets monthly revenue tables into print-ready newspaper PDFs. Google sign-in and a three-tier ACL let managers add and remove users themselves.
- **Generative AI in production, with guardrails**: BigQuery `AI.GENERATE` (Gemini) classifies comment sentiment, post topics and what negative comments target, and writes commentary grounded in current figures only; a comment RAG layer (Vertex embeddings) is gated by a weekly LLM-as-judge eval that fails the job when quality drops. A four-tool newsroom agent is live — no free-form SQL, mandatory self-check, hard cost caps, weekly replay eval.
- **Set up how the team governs and delivers**: data-governance inventory, cost-attribution labels, decision records, staged onboarding and a cross-project knowledge base; a repo contract layer (no-go zones, acceptance commands, guards) so people and AI agents work under the same rules.

Cleflex Technology · Data Team Lead — May 2023 – Oct 2025

- **Led a four-person Data Team** — scheduling, prioritisation and delivery quality — running Scrum (stand-ups, sprint planning, retros) on Jira/GitLab, and partnering with product to turn data into Superset dashboards used for decisions.
- Airflow crawling ETL (Scrapy → S3/MongoDB) with Telegram alerts; built an Apache Iceberg + Spark lakehouse and standardised deployment with Docker/makefiles so teammates could stand up environments fast.

Amber Technology · Data Engineer — Nov 2022 – Apr 2023

- Automated on-prem → GCP Cloud Storage ETL with Fluentd, daily Airflow computations, introduced PySpark for distributed processing and planned the overall data architecture.

PIXNET · Senior Algorithm Engineer — Sep 2021 – Nov 2022

- **Built fluenthub from zero, a Fluentd collection service on GKE** (6 replicas with rolling updates, Ingress + static IP) writing to GCS/BigQuery; load-tested by replaying 400k real articles through Spark: ~1,900 req/s peak, zero errors. Search Console API collection at 9M rows/day; ranking and recommendation algorithms; SEO.

LiTV · Software Engineer — Oct 2019 – Sep 2021

- Ansible-deployed Fluentd fleets (GCE + on-prem IDC) streaming into BigQuery; AWS Data Pipeline cross-cloud ETL; automated Data Studio reporting; gender prediction for anonymous users and customer algorithms (XGBoost/RandomForest/SVM).

Earlier · NCHC Software Engineer · NTUST Programming Lecturer · Dataa Data Analyst — Oct 2015 – Aug 2019

- TWCC AI-platform acceptance testing and CKAN data-market automation; taught Python data analysis; delivered public-sector and enterprise sentiment-analysis projects (crawl → text mining → reports).

SKILLS

DATA ENGINEERING	BigQuery · dbt · Cloud Run Jobs + Scheduler · Airflow · PySpark/Spark · Apache Iceberg · Fluentd · Scrapy
CLOUD	GCP (Cloud Run · IAM · Secret Manager · GKE · GCE · GCS) · AWS · Azure · on-prem ↔ cloud · Cloudflare
DEVOPS	Docker · Kubernetes · GitHub Actions · Cloud Build · Ansible · Prometheus/Grafana · Linux · Bash · Python
AI	Gemini (AI.GENERATE · Vertex) · RAG + LLM-as-judge · agent guardrails · XGBoost/LightGBM · Chinese NLP
DELIVERY	Streamlit · Superset/Looker Studio · Scrum · Jira/GitLab · SQL
OPEN SOURCE	Apache Airflow #67592 (merged Oct 2026; restored a metric lost in Airflow 3) · OpenClaw #84890 (merged May 2026; fixed a gateway restart deadlock)
SIDE PROJECTS	realping.tw: property-price REST API and MCP server (in the official MCP Registry), container smoke tests in CI, post-deploy version checks · bopomofokids.com: React Zhuyin site (~4,500 visits, Sept 2026) · homelab: five Docker stacks, Prometheus + Grafana monitoring

EDUCATION

NTUST — Information Management
PhD candidate (candidacy 2019; left for industry) 2016 – 2019

Yuan Ze Univ. — Information Management
M.S. · Thesis on noise filtering & word-of-mouth mining in car forums 2013 – 2015

Kainan Univ. — Information & E-Commerce
B.S. 2009 – 2013
